

1. How to Access SVN

Repository URL: As given by instructor or Tech Lead.

Login ID : As given by instructor or Tech Lead.

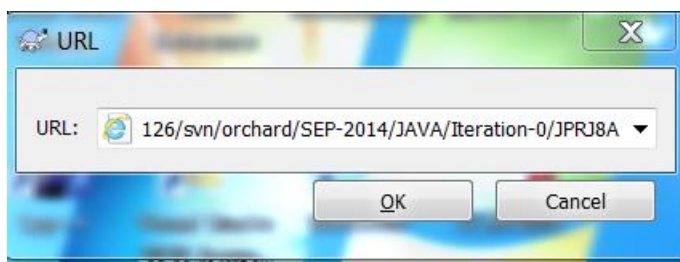

Password : As given by instructor or Tech Lead.

2. Steps to Checkout code from the repository

Just Right click on the desktop

Got to Tortoise SVN and Repo Browser and copy the url of the project in which u are in

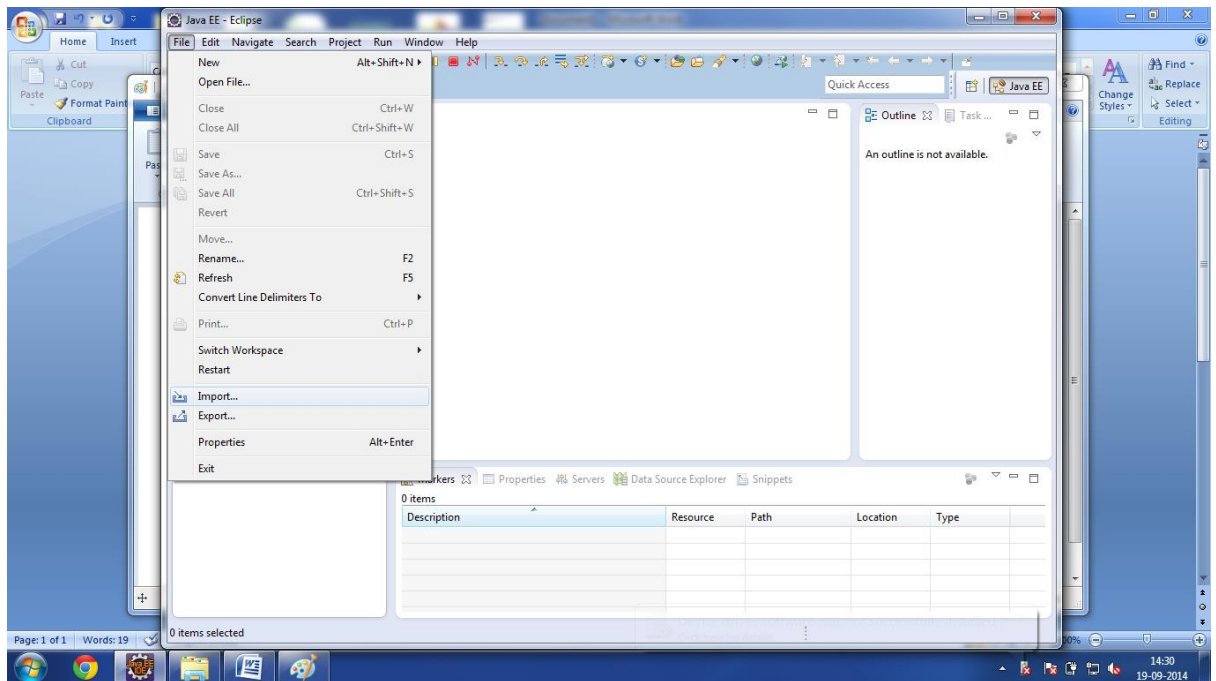

Please note the URL which is specified makes sure it is https not http

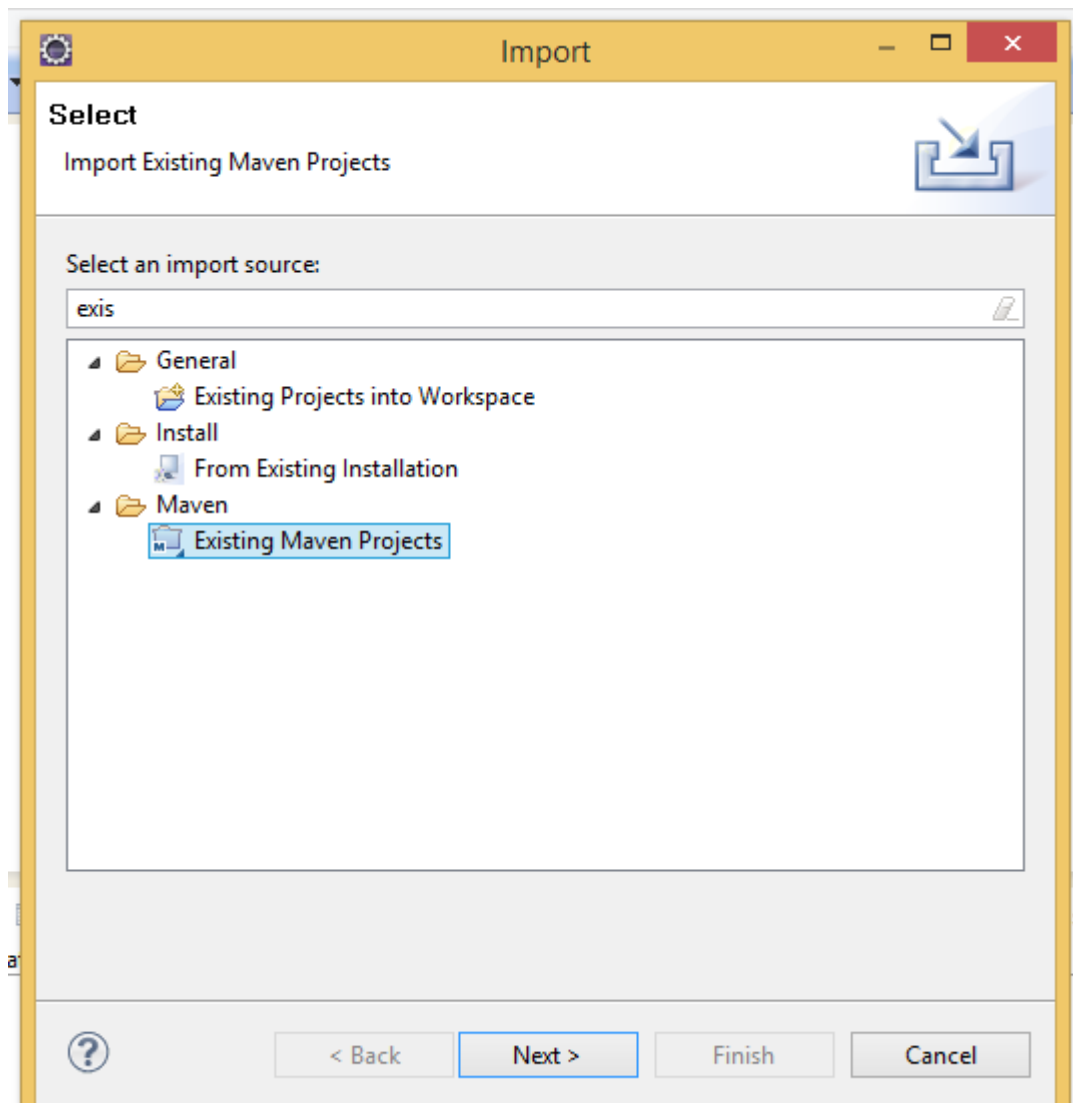

3. Open MySQL and create a database (Name can be of your choice e.g happytripclean)

4. Open Eclipse

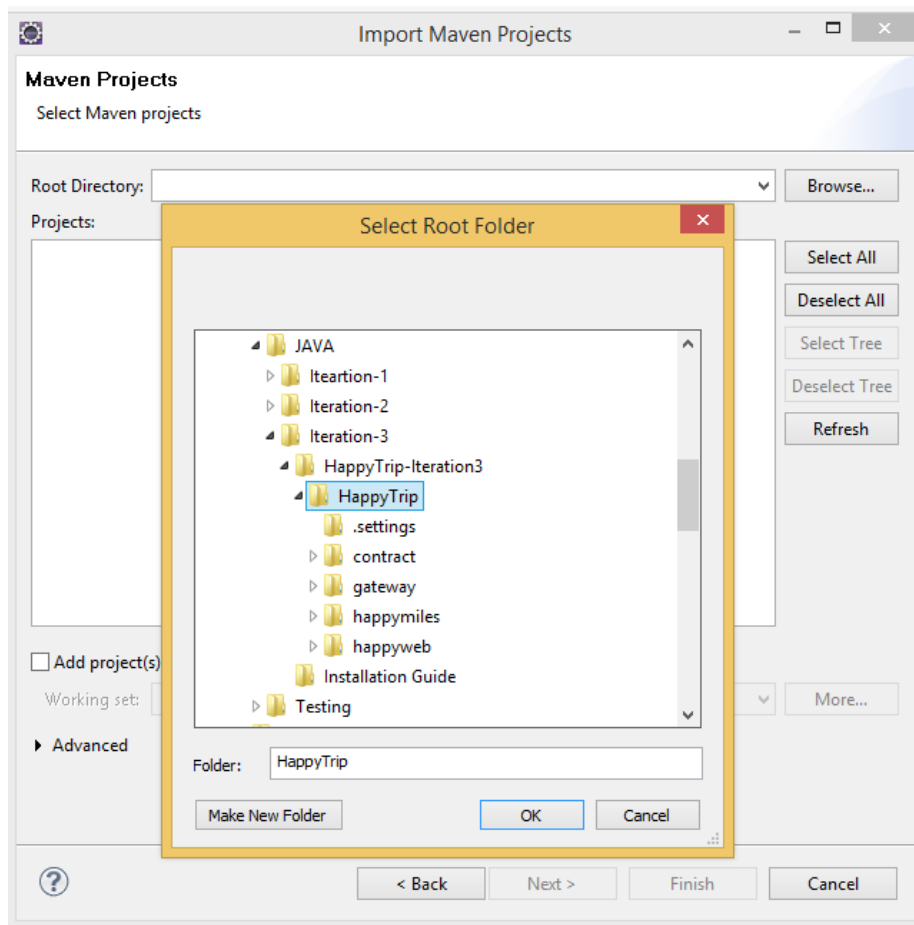

5. Select a workspace
6. Click on File -> Import

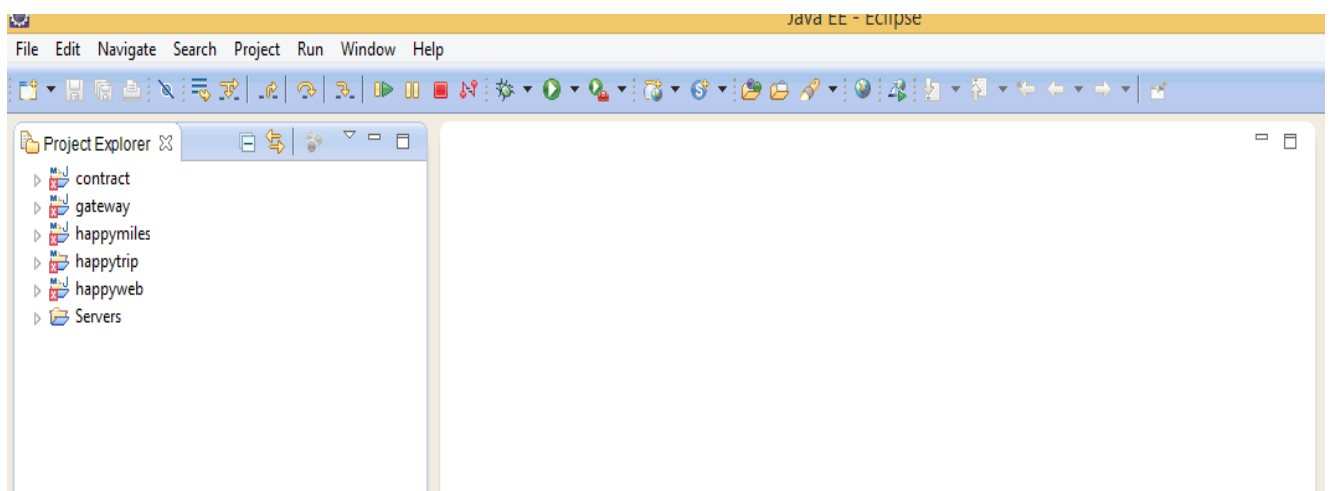

7. Click on Existing Maven Projects into workspace

8. Browse to the folder where you have checked out the code

9. Click OK -> Finish. Now it will build the workspace

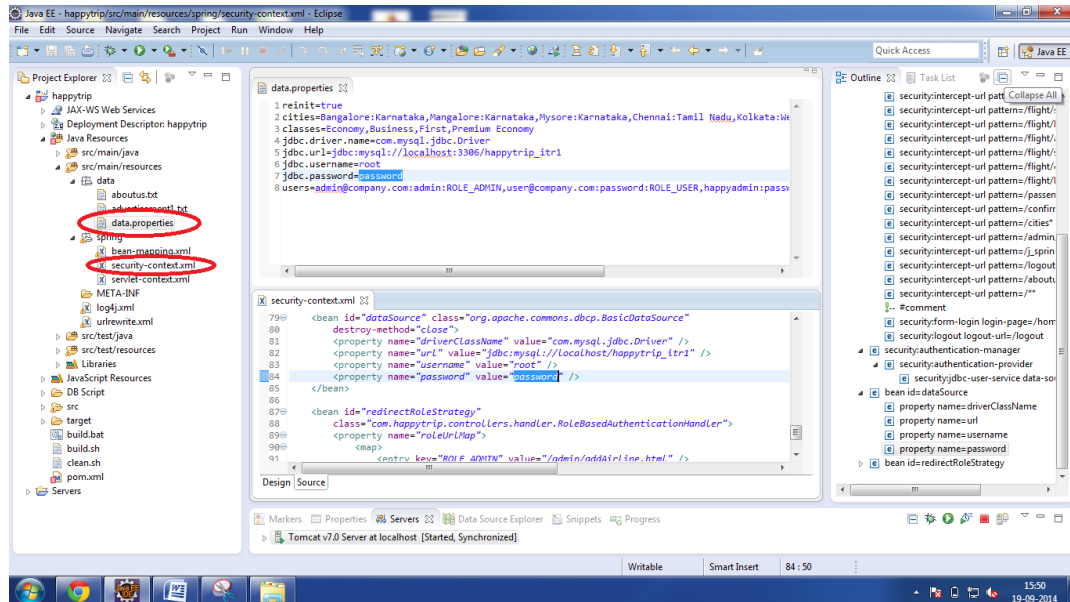

10. Now Change the database credentials in the following file

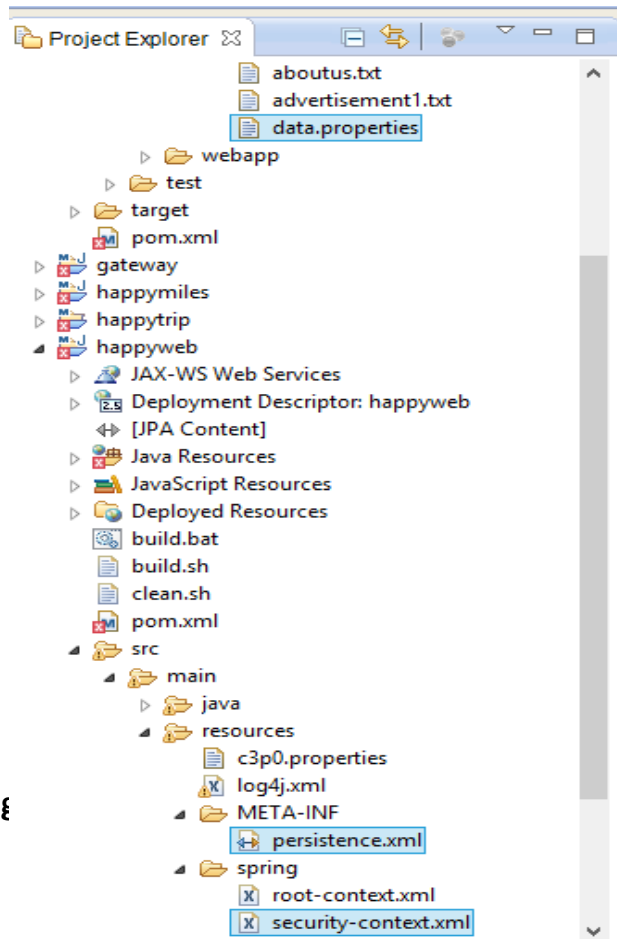

contract\src\main\resources\data\data.properties

happyweb\src\main\resources\spring\security-context.xml

happyweb\src\main\resources\META-INF\persistence.xml

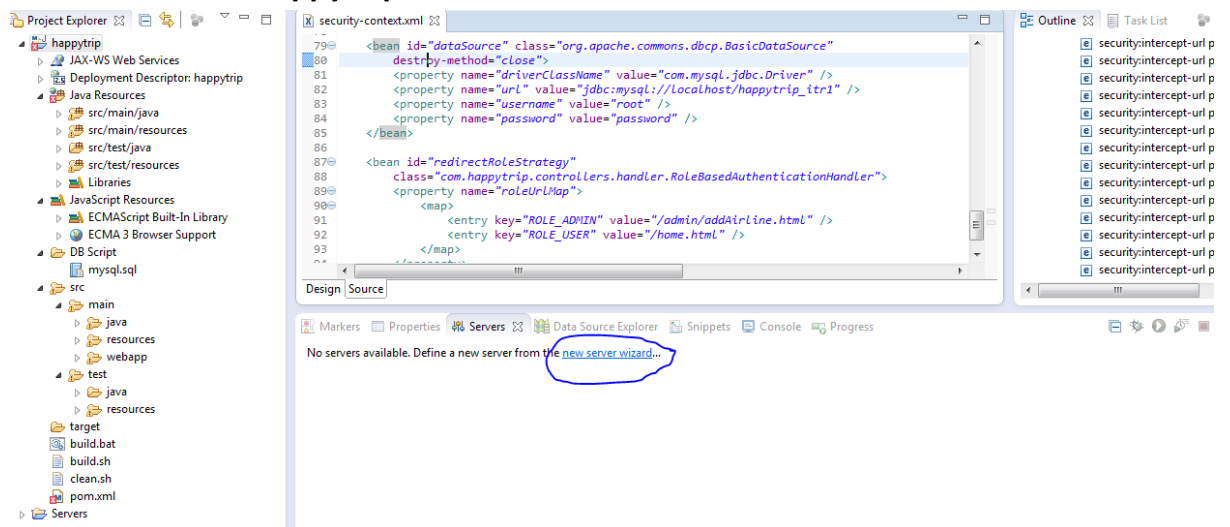

11. You will be able to see following things in explorer

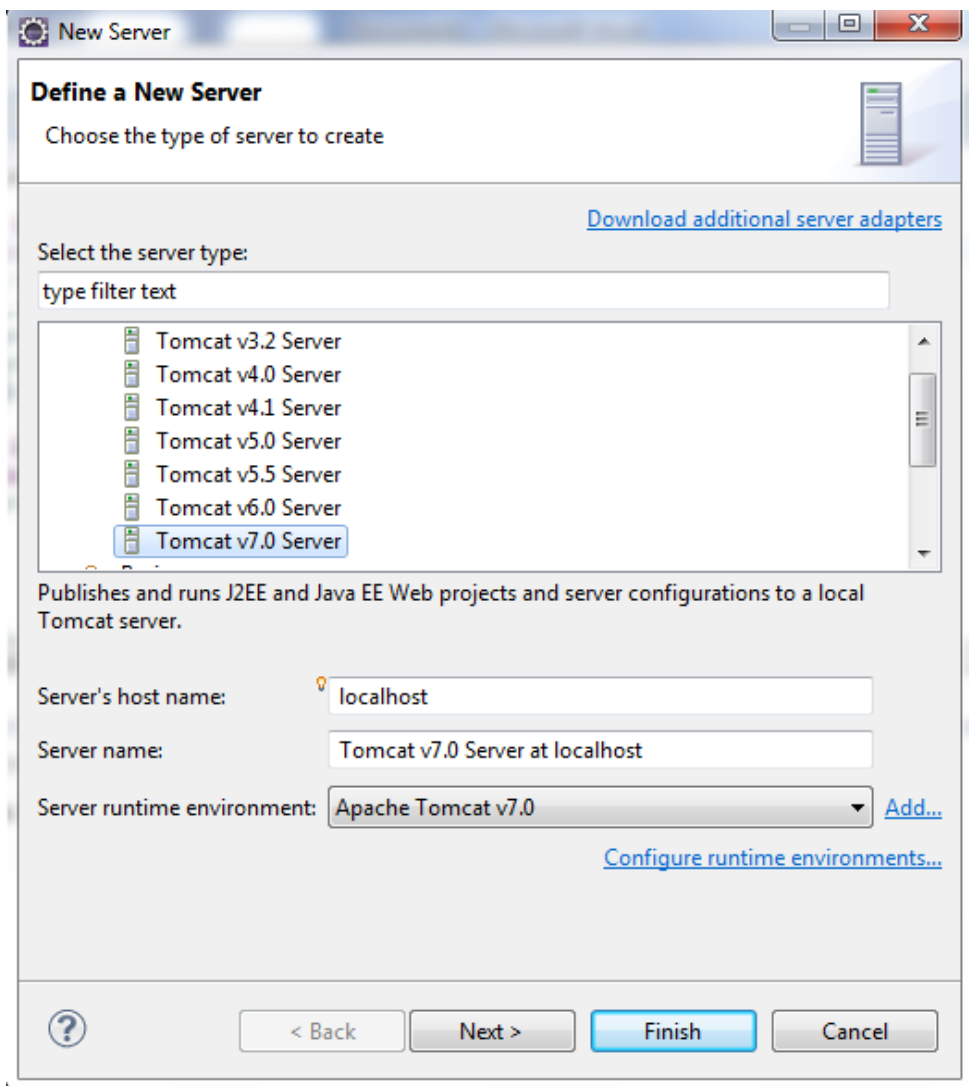

12. Ri

install

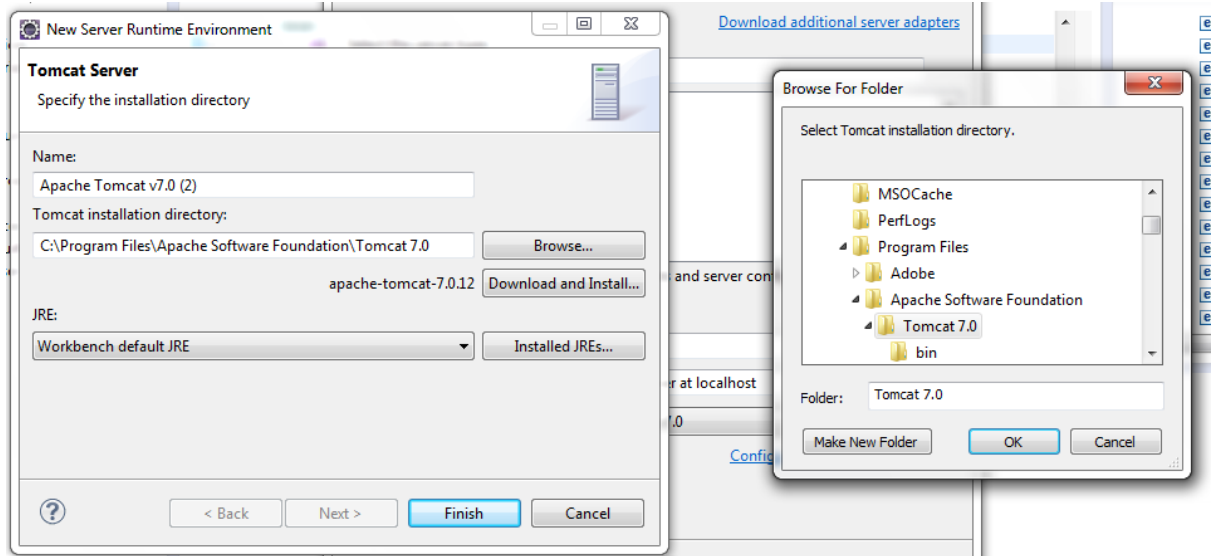

13. Add a Server to Run HappyTrip

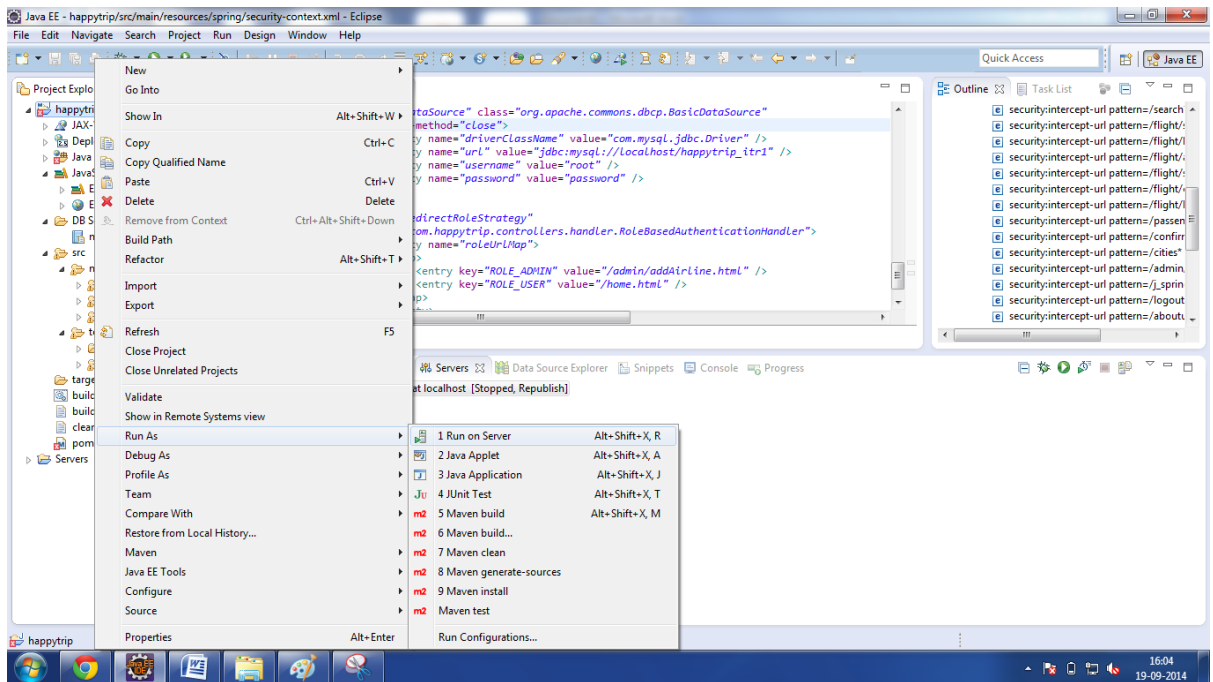

14. Select Tomcat 7.0

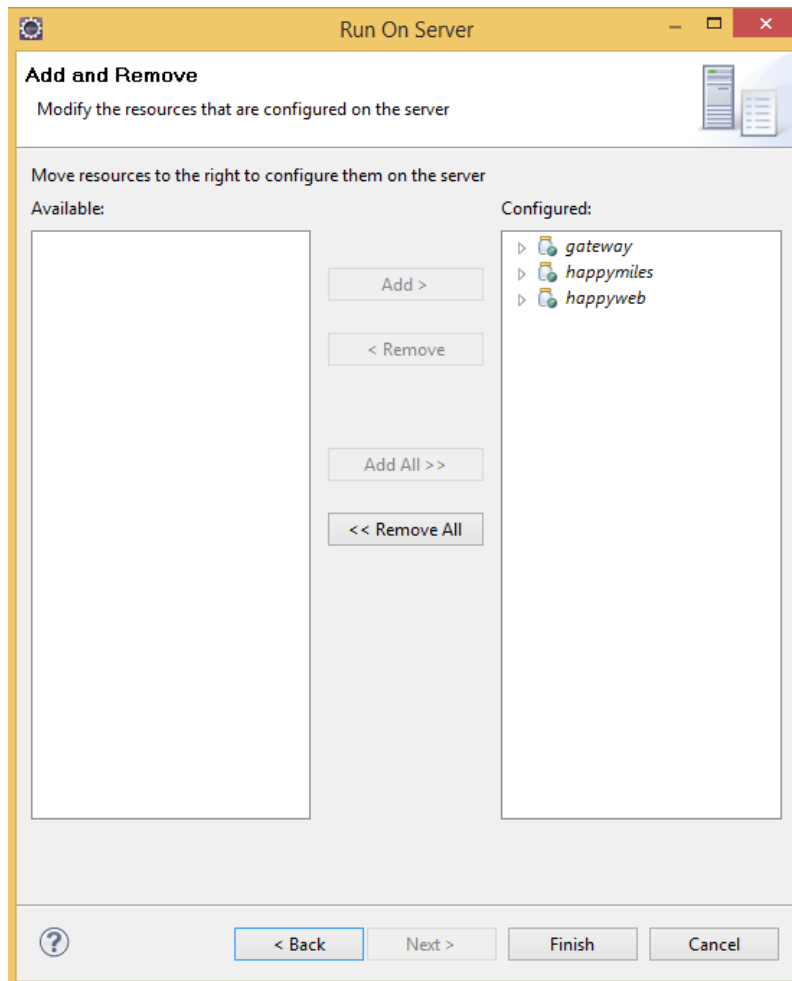

15. Click Next, Browse to the Tomcat location

16. Right Click on happyweb -> run as -> run on server

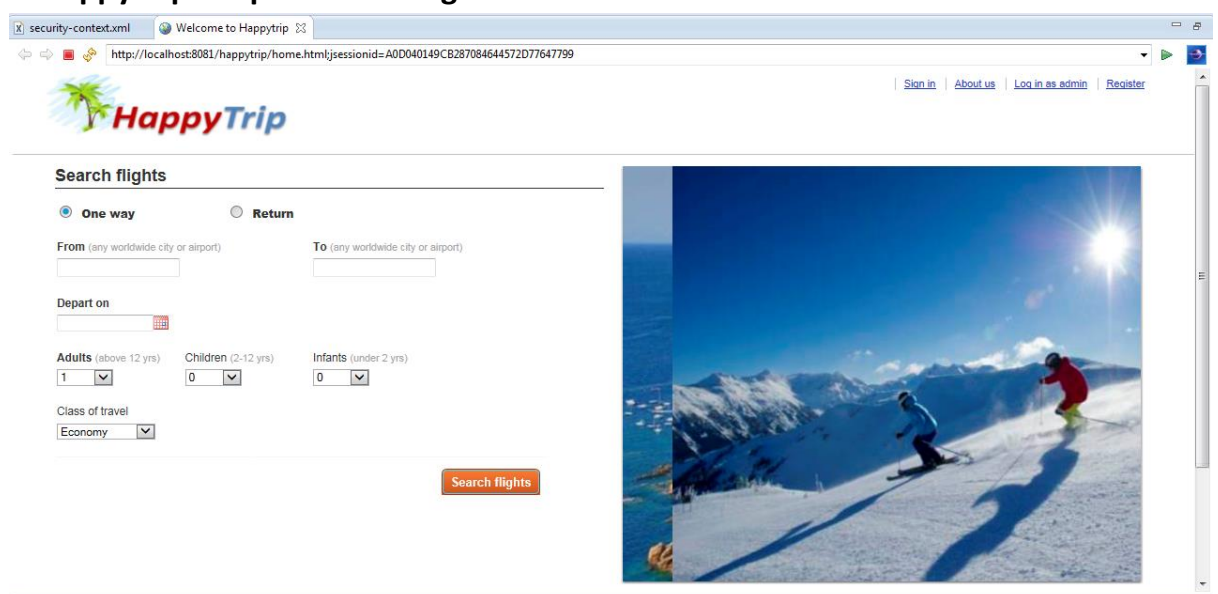

17. Select happyweb, happymiles, gateway to run on server

18. Click Finish

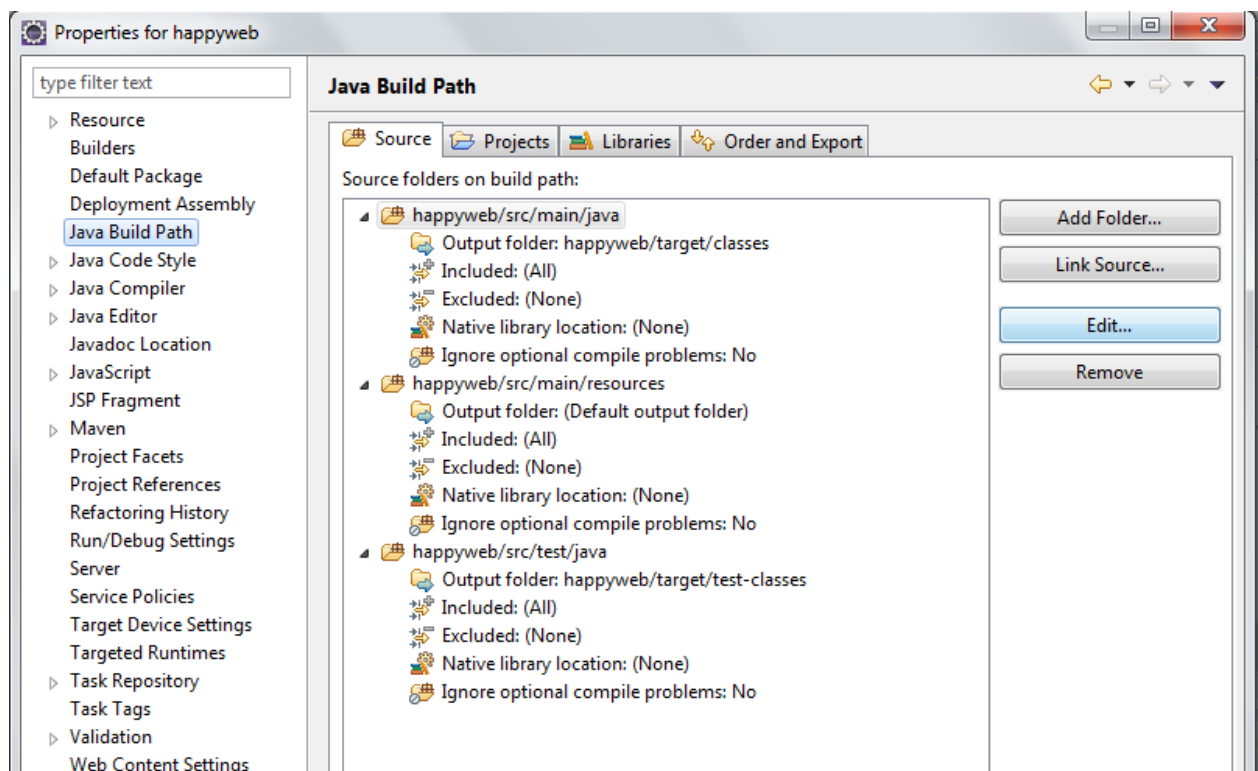

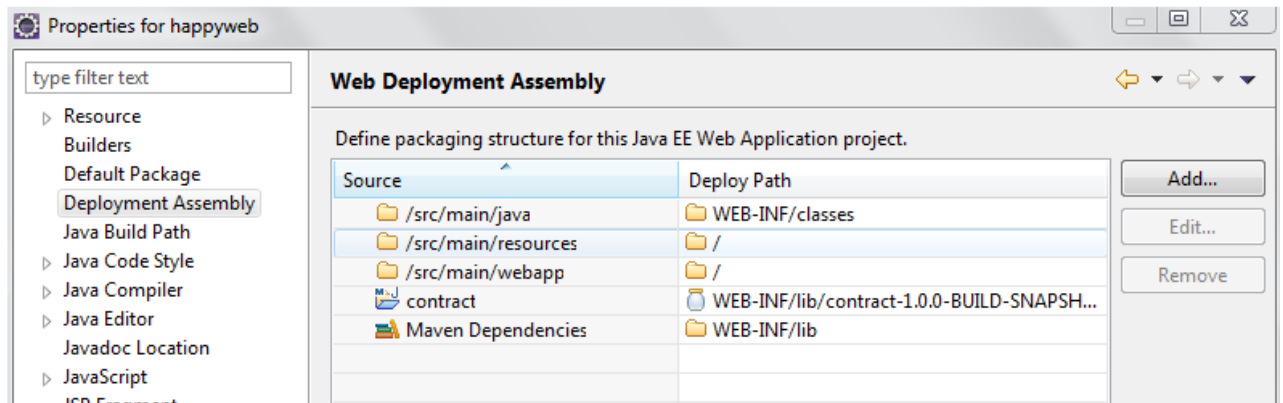

19. Your HappyTrip is Up and Running

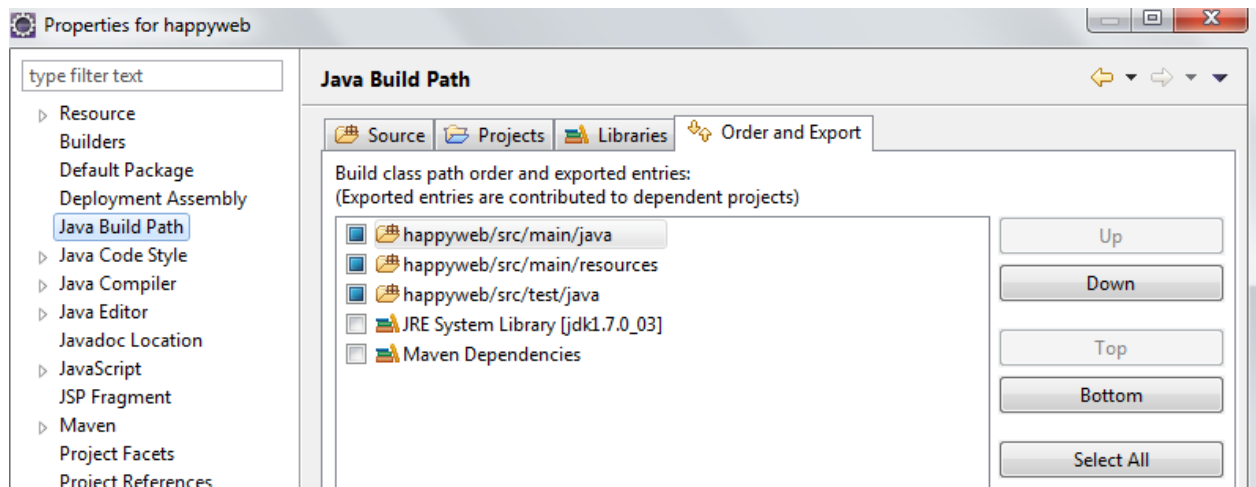

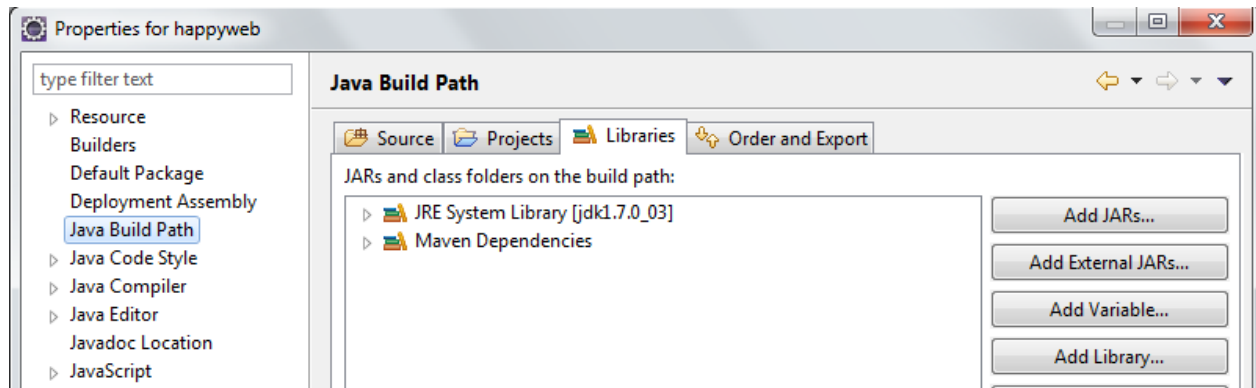

If you are having problem

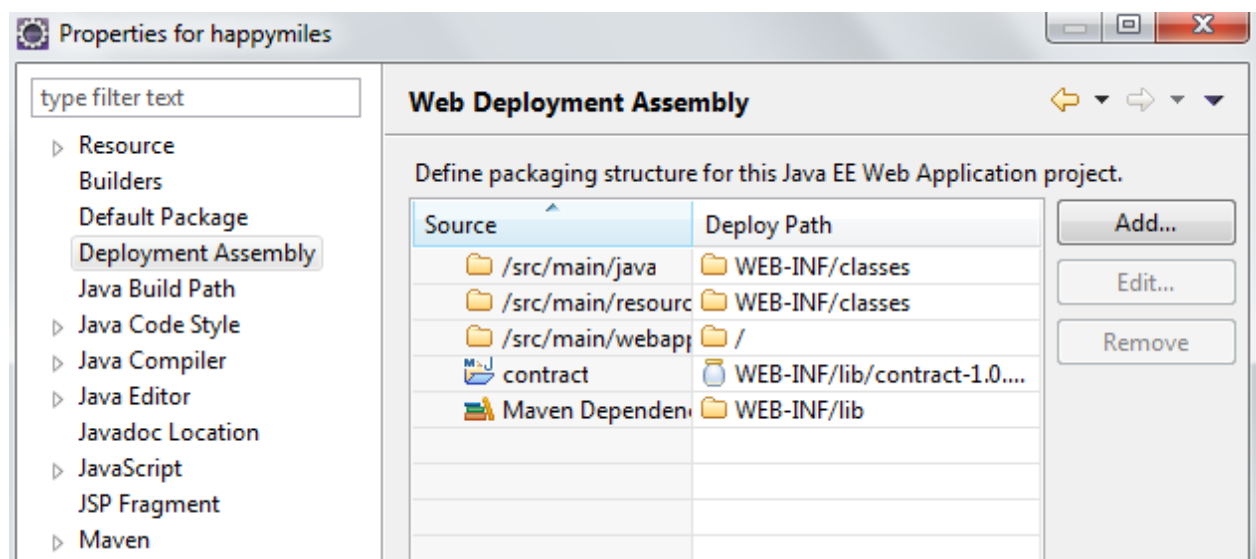

Check if you have all the folders or not, if not just add it

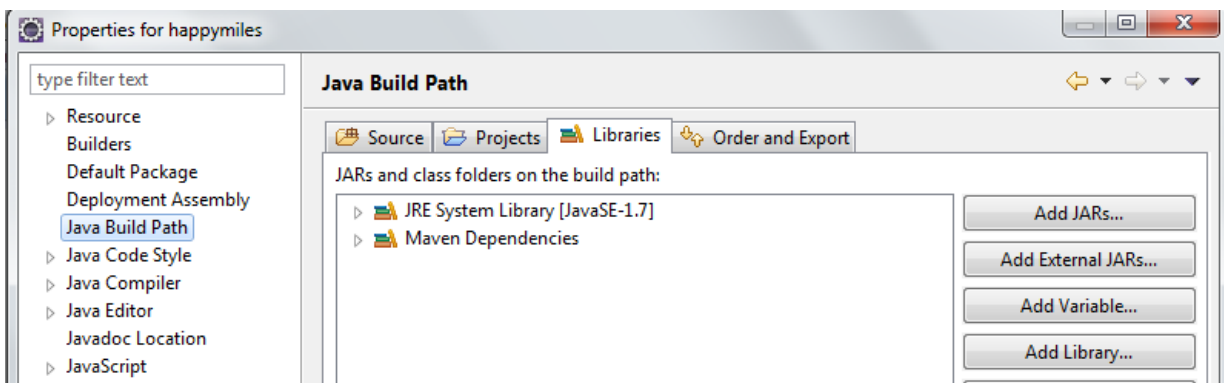

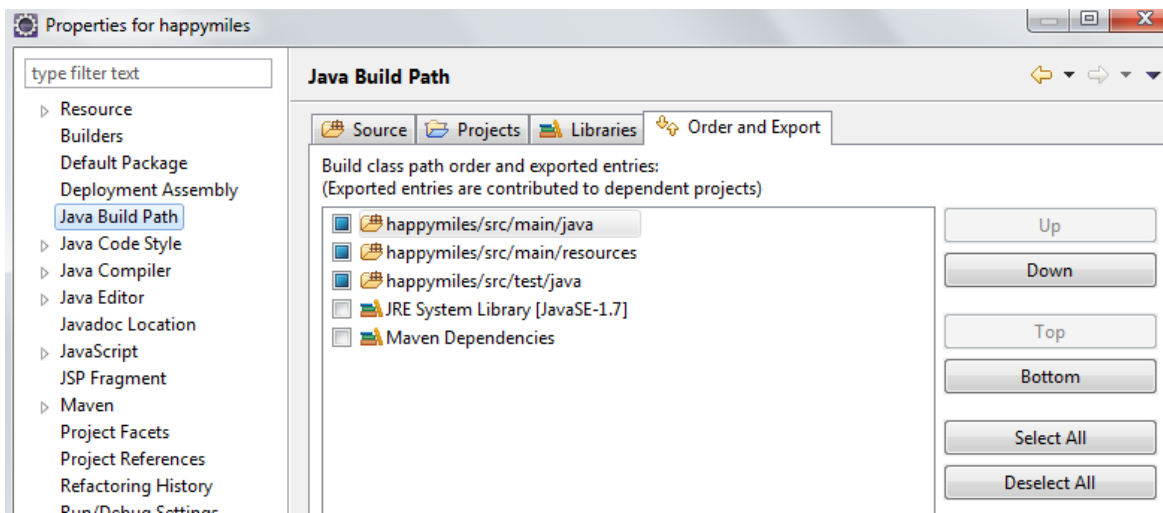

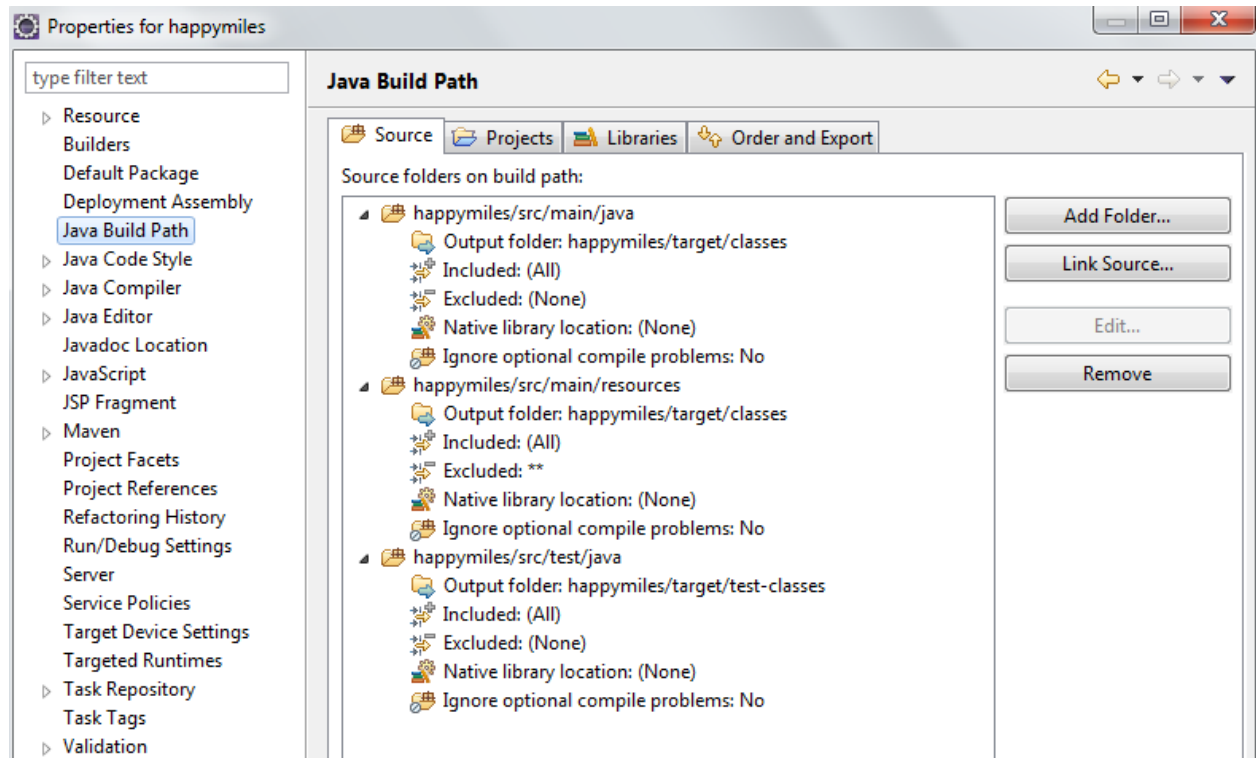

Happyweb

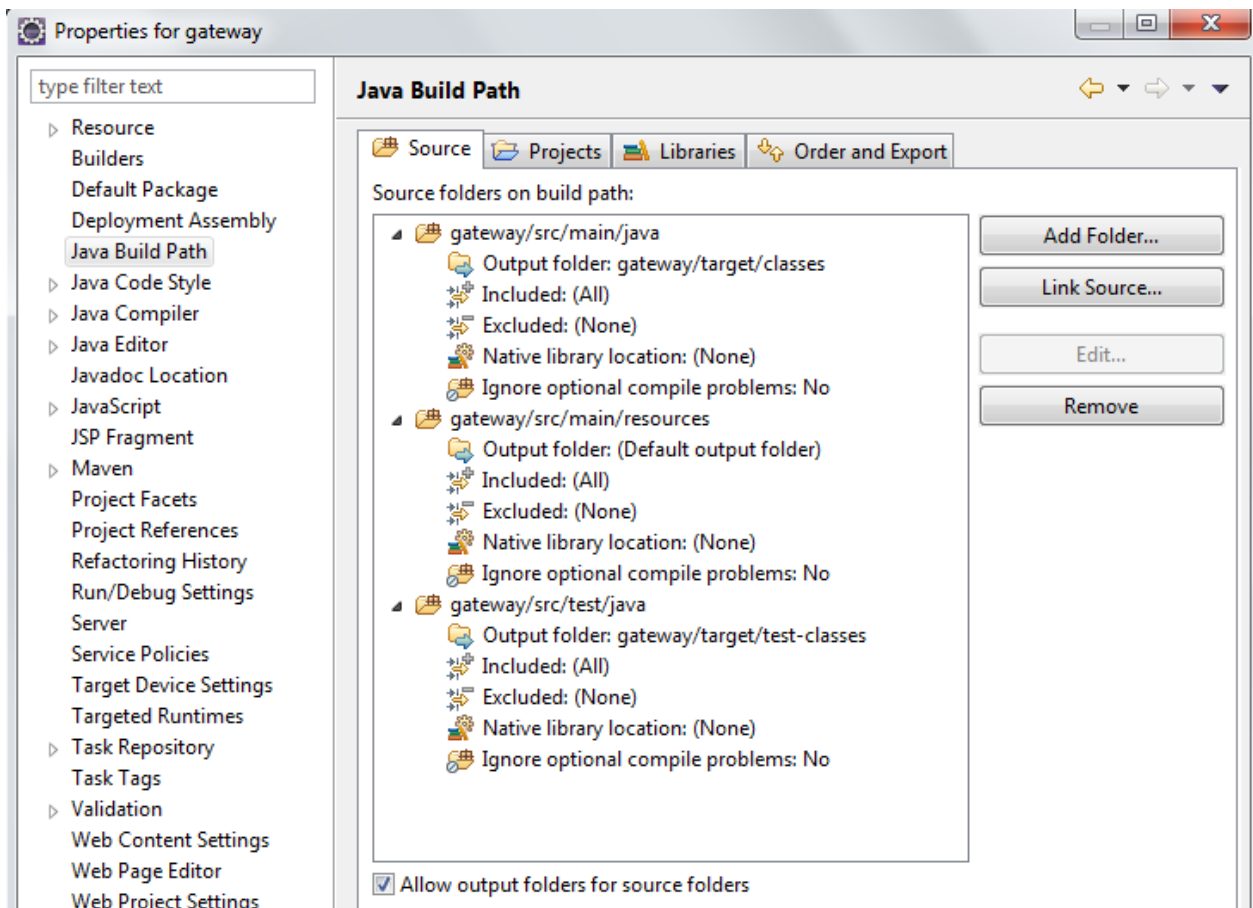

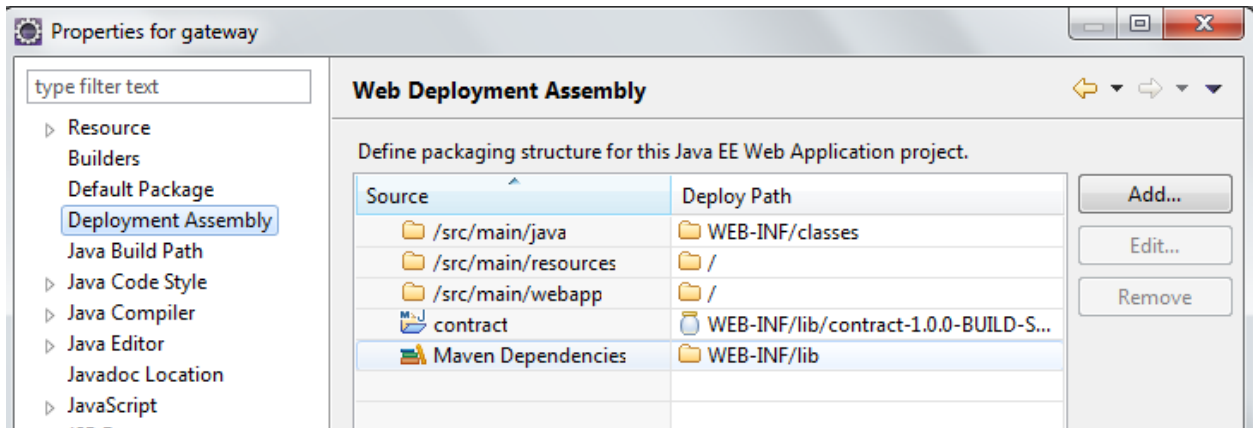

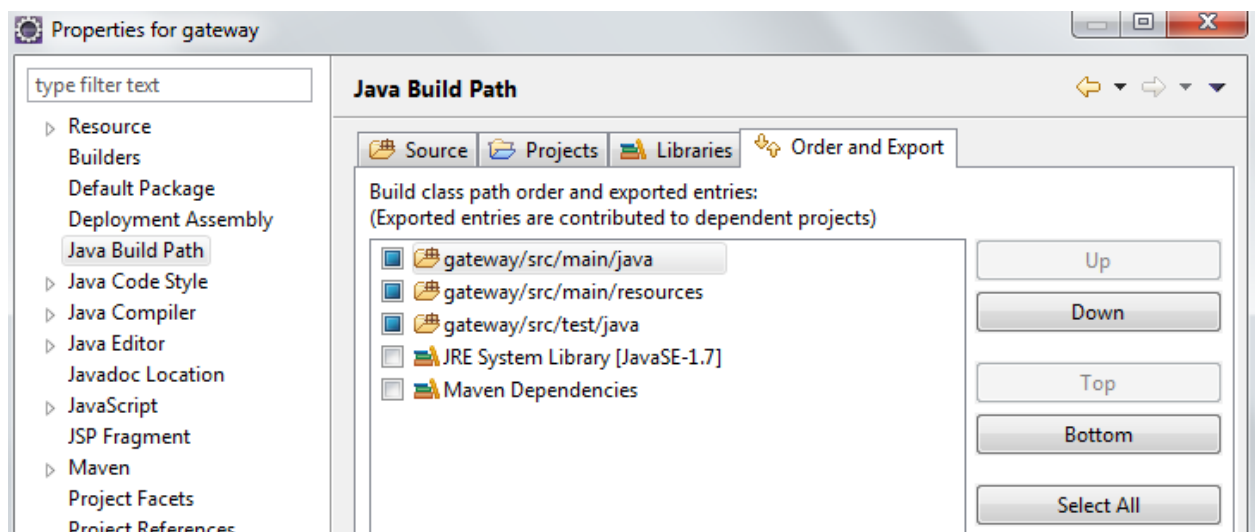

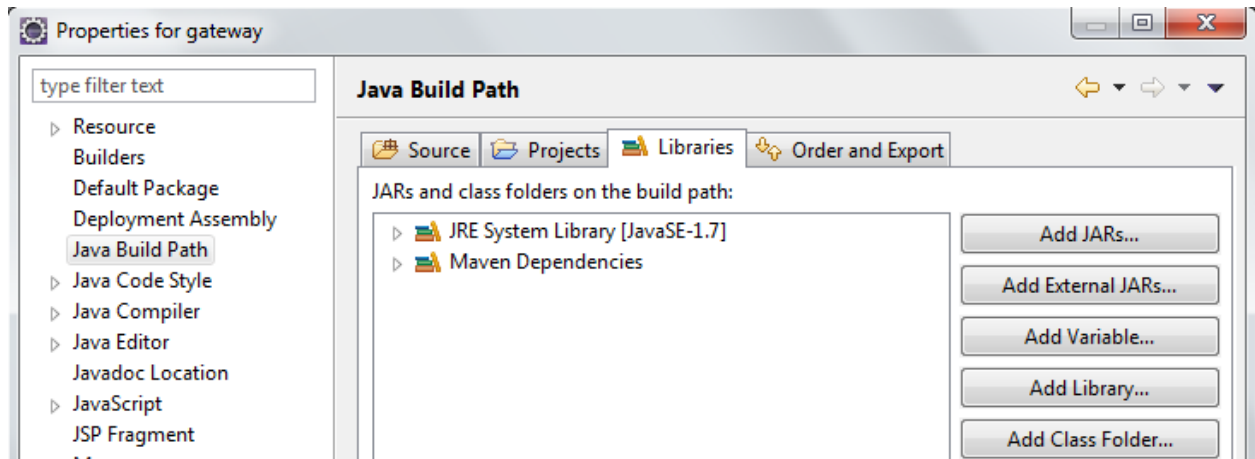

Happymiles

Gateway

Contract
